

Strategic Model Portfolio Profile – Global Fixed Income (GFI)

PROGRAM DESCRIPTION

Transamerica I-Series® is a separately managed account program, which uses strategic, alternative and tactical asset allocation models to establish an individualized client portfolio in accordance with the client's particular investment objectives and risk tolerance. Each I-Series client owns the underlying securities in his or her account.

THE INVESTMENT OBJECTIVE AND PROCESS

Strategic Global Fixed Income Model seeks long-term total returns by investing across major fixed income sub-asset classes. This model may be considered by those who have an investment time horizon of 1+ years and who are looking for long-term total returns at reasonable risk. The Strategic Model Portfolios apply asset allocation developed by Transamerica Financial Advisors, Inc. (TFA). TFA used mean-variance analysis of several market indexes over multiple economic and market cycles as well as independent research to create the model portfolio. After creating the asset allocation model, TFA selected investments in each asset category that are intended to track representative market indexes. The underlying investments in the Strategic Model Portfolios consist of Exchange Traded Funds (ETFs). In selecting the investments, TFA considered many factors including expense ratio, performance history, liquidity, and number of holdings.

EXCHANGE TRADED FUNDS AND EXCHANGE TRADED NOTES

An Exchange Traded Fund is an investment product that allows an investor to buy and sell shares in a single security that represents a fractional ownership of a portfolio of securities. ETFs hold a basket of securities and are typically designed to replicate the performance of an established index. ETFs are inherently transparent, as their holdings are published daily. ETFs are listed on a national exchange and can be bought and sold like common stocks throughout the trading day. Retail investors generally cannot purchase or redeem ETF shares from the issuing fund company.

ETF Characteristics

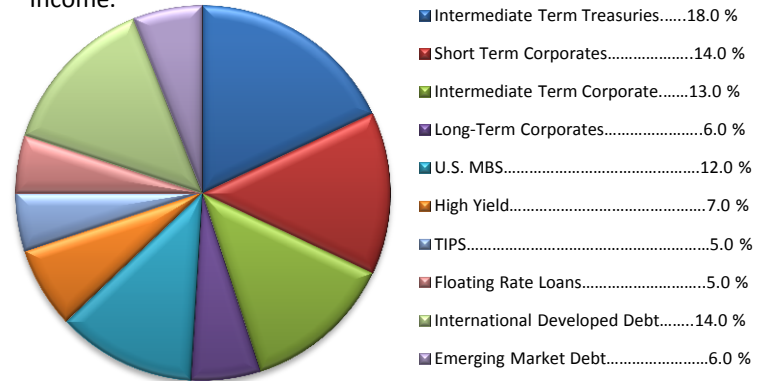

- Liquidity from intraday trading
- Can provide broad coverage of market sectors
- May trade at a premium or a discount
- Subject to market and exchange conditions

More About ETFs

- Traditionally have lower management fees than mutual funds
- Typically generate fewer capital gains than mutual funds
- Index based ETFs, due to their passive management style, tend to have minimal style drift

STRATEGIC ASSET ALLOCATION

The Global Fixed Income Model has a target allocation of 100% Fixed Income.

TRANSAMERICA I-SERIES® Global Fixed Income

Asset Category	Corresponding Indexes of ETF/ETN Holdings
Intermediate Term Treasuries	• Barclays U.S. 3-7 Year Treasury Index
Short Term Corporates	• Barclays U.S. 1-5 Year Corporate Bond Index
Intermediate Term Corporates	• Barclays Intermediate Corporate Bond Index
Long Term Corporates	• Barclays U.S. 10+ Year Corporate Bond Index
MBS	• Barclays U.S. Mortgage Back Security Float Adjusted Index
High Yield	• Barclays High Yield Index
TIPS	• Barclays U.S. Treasury Inflation Protected Securities Index
Floating Rate Loans	• Barclays U.S. Dollar Floating Rate Note < 5 Years Index
International Developed Debt	• Barclays Global Aggregate ex-USD Float Adjusted RIC Capped Index
Emerging Market Debt	• Barclays USD Emerging Markets Government RIC Capped Index

This model portfolio is intended to track the above indexes. The above indexes do not necessarily correspond to the indexes used to develop the models. TFA may change the ETF and ETN holdings at any time. The securities that will be purchased using this model portfolio are subject to market risk and an investor may experience loss of principal. For a complete description of all fees, costs, and expenses, please refer to the Form ADV Part 2A and/or Appendix 1.

RISK AND RETURN

Transamerica I-Series® Strategic Model Portfolios consist of a series of model portfolios with varying levels of risk and potential return. Global Fixed Income emphasizes current income and preservation of capital and is intended to have less volatility when compared to other I-Series Strategic Model Portfolios.
