

PROGRAM DESCRIPTION

Transamerica I-Series® is a separately managed account program, which uses strategic, alternative and tactical asset allocation models to establish an individualized client portfolio in accordance with the client's particular investment objectives and risk tolerance. Each I-Series client owns the underlying securities in his or her account. The Active Alternative Core is designed to provide diversification by using multiple asset classes and alternative strategies.

THE INVESTMENT OBJECTIVE AND PROCESS

The Transamerica I-Series® Active Alternative Core Model Portfolio was designed using both traditional and alternative investments to provide a hedge against inflation with a low correlation to both equity and fixed income markets. This model may be considered by investors who have an investment time horizon of 5+ years and are looking for ways to diversify their overall portfolio. The underlying securities in this portfolio are mutual funds that invest in growth equity securities to help hedge against inflation and United States sovereign debt which is intended to function as a stabilizer in deflationary environments. Uncorrelated alternative asset classes such as natural resources, precious metals, hedged equity, and event driven securities (i.e. merger arbitrage) are incorporated to serve as a hedge against market volatility in unfavorable market conditions. In selecting mutual funds to include in the portfolio, TFA considered performance history, Morningstar ratings, manager tenure, provider diversification, and standard deviation relative to peers.
